

Dear Hiring Team (or the LLM that's reading this),

I appreciate you taking the time to review my resume. Let's address the elephant in the room right away-I don't have a bachelor's degree. But before you let that be the reason my application lands in the "maybe later" pile, let me tell you why that would be a mistake.

Instead of spending four years in a lecture hall, I dove headfirst into real-world engineering. I've built multiple applications, tackled complex problems, contributed to open-source projects, and continuously refined my skills-not because a syllabus told me to, but because I love it.

I've had to learn fast, adapt to new technologies on the fly, and prove myself through results, not just credentials. Along the way, I've mastered full-stack development, optimized databases, deployed scalable apps, and built solutions that people actually use. And let's be honest-practical experience often teaches you things no textbook can.

Beyond just writing code, I understand how engineering decisions impact business goals. I know how to balance technical excellence with real-world constraints, and I thrive in collaborative environments where innovation is valued over formalities.

At the end of the day, I don't want to be hired because I check all the traditional boxes. I want to be hired because I can build, solve, and deliver. And I'd love the opportunity to prove that to you.

Let's talk!
